ABSTRACT

Alumni Connect is a platform designed to establish and strengthen connections between students and alumni of educational institutions. The main objective of this project is to provide a centralized system where students and alumni can create profiles and connect with each other based on shared interests, skills, and organizations. In many educational institutions, alumni information is scattered across different records and databases, making it difficult for students to identify and contact suitable alumni for guidance and career opportunities. Alumni Connect aims to overcome this problem by providing a structured and user-friendly platform for networking and collaboration.

The proposed system includes features such as profile management, smart search and matching, mentoring requests, job and placement opportunities, events and groups, messaging, and notifications. These features enable students to seek career guidance, receive mentorship, explore job opportunities, and build professional relationships with experienced alumni. The platform also helps alumni share their knowledge, professional experiences, and career opportunities with current students. By organizing alumni information and simplifying communication, Alumni Connect aims to improve alumni engagement and strengthen the relationship between educational institutions, students, and graduates.

The project demonstrates how technology can be used to create a collaborative alumni network that supports mentorship, professional networking, and career development. The expected outcome is a more connected educational community with improved access to guidance, referrals, and placement opportunities.
